PropelGo: Tech & Animation Report

Project mein istemal hui technologies, motion effects, font aur visual system ka code-based overview.

1. Tech stack

- Next.js 16.4.0 - React framework; app routes aur page structure src/app mein.
- React 19.3.0 + TypeScript - UI components, interactive states aur typed code.
- Tailwind CSS 4 - utility-first styling; design tokens globals.css mein defined hain.
- Motion 14.1.0 (motion/react) - transitions, scroll reveals, gestures aur animated values.
- Lenis 1.3.26 - desktop pointer devices par smooth scrolling; reduced-motion aur touch par band.
- Next/font/google - Inter font ko optimize karke load karta hai. Inline SVG/React components icons aur illustrations ke liye hain.
- Project scripts: next dev, next build, next start, eslint.

2. Font aur typography

- Main font: Inter (Roboto nahi). src/app/layout.tsx mein Next.js Inter import hota hai aur --font-inter variable set hota hai; globals.css mein wahi sans font hai.
- Headings: aam taur par weight 600 (semibold), tight negative letter spacing aur responsive clamp-based size. Display, H2, H3, lead aur body ke alag scales hain.
- Body text: Inter regular; UI labels mein 500/600 weights bhi. Numbers ke liye tabular numerals utility hai.
- Font files public folder mein bundled nahi hain; Next/font/google se load hoti hain.

3. Design tokens

- Palette: forest/brand green, lime/mint accents, white surfaces, ink #1f1f1f aur copy #595959.
- Motion easing: cubic-bezier(0.16, 1, 0.3, 1) jaise soft ease-out curves; responsive layout Tailwind utilities se.
- Reduced motion: CSS prefers-reduced-motion rules aur Motion useReducedMotion hooks dono maujood hain.

Animations: kya-kya use hua hai

Effects ke code locations aur unka screen par dikhne wala behavior.

4. Entry aur scroll animations

- Fade + rise: headings, paragraphs, buttons aur sections opacity 0 se 1 aur thoda neeche se apni jagah aate hain; staggered delays. Home hero aur options HeroB/HeroC mein.
- Scroll reveal: Reveal component whileInView ke zariye section ko viewport mein aane par ek baar reveal karta hai. Overview, final CTA aur content sections mein.
- List stagger: table rows, steps aur card content chhote delays ke saath ek ke baad ek enter hote hain.
- Tab/content crossfade: AnimatePresence ke saath purana content exit aur naya enter karta hai; HeroSlip, HeroB, testimonials aur options demos mein.
- Page load hero art: illustration/preview opacity aur translate ke saath appear hota hai.

5. Interactive aur continuous motion

- 3D flip cards: FlipCard click par rotateY 180-degree spring motion se flip hota hai; hover state bhi pass hoti hai.
- Animated counters: Counter scroll par numbers ko target value tak count-up karta hai; Indian digit grouping lagti hai.
- Smooth scroll: Lenis desktop mouse/trackpad par scrolling ko smooth karta hai.
- Marquee: Ecosystem logo/name strip CSS keyframes se 60-second linear loop mein chalti hai.
- Orbit/auto carousel: EcosystemOrbit nodes ko lagbhag 2.8 seconds mein rotate/highlight karta hai; Testimonials aur capabilities mein active content badalta hai.
- SVG path drawing: charts/illustrations mein line ya pathLength animate hota hai; bars, progress rails aur check marks fill/scale hote hain.
- Micro-interactions: nav dropdown fade/slide, chevron rotation, mobile menu transforms, tabs ka shared indicator, toggle spring, pulse status dot aur color/opacity transitions.

6. Motion/accessibility behavior

- Kai Motion effects useReducedMotion se simplify/disable hote hain. Global CSS bhi animation aur transition duration ko reduce karta hai.
- Lenis reduced-motion preference aur coarse pointer (touch) par initialize nahi hota.
- Kuch visual demos timed intervals/timeouts se khud progress karte hain; user actions se tabs, switches aur cards bhi badalte hain.

Kahan milenge? Quick reference

Component map taaki aap code mein effects jaldi dhoondh saken.

7. Main files

- src/components/ui/Reveal.tsx - scroll par fade-and-rise reveal.
- src/components/ui/SmoothScroll.tsx - Lenis smooth scroll.
- src/components/ui/Counter.tsx - in-view count-up values.
- src/components/ui/FlipCard.tsx - 3D flip card, spring transition.
- src/components/home/Hero.tsx - homepage hero entrance motion.
- src/components/home/visuals/HeroSlip.tsx - interactive payment demo; spring tilt aur tab/content transitions.
- src/components/home/visuals/EcosystemOrbit.tsx - orbit/active-node animation.
- src/components/home/Capabilities.tsx - timed active item, progress and content transitions.
- src/components/home/Ecosystem.tsx - CSS marquee.
- src/components/layout/Header.tsx - dropdown, mobile menu, hover/scroll states.
- src/app/globals.css - font tokens, colors, marquee keyframes, reduced-motion rules.
- src/app/layout.tsx - Inter loading and global app wrapper.
- src/components/options/HeroB.tsx, HeroC.tsx - alternate animated hero/demo concepts.

8. Short summary

- Animation style: clean SaaS/product UI motion - subtle fade/slide entrances, hover/toggle feedback, tab/content transitions, number counting, looped marquee and illustrative SVG motion.
- Core motion tools: Motion for React animations, CSS keyframes/transitions for simple loops and states, Lenis for smooth scrolling.
- Font: Inter (Roboto nahi). Styling: Tailwind CSS 4 with project-specific CSS design tokens.

Libraries aur font details

package.json aur typography code se verify ki hui exact list.

9. Runtime libraries (dependencies)

- next 16.4.0 - framework aur next/font font loading API.
- react 19.3.0, react-dom 19.3.0 - UI rendering aur component runtime.
- motion ^14.1.0 - motion/react package: animations, gestures, scroll reveals aur spring transitions.
- lenis ^1.3.26 - smooth scrolling.

10. Development libraries (devDependencies)

- tailwindcss ^4 - CSS utility framework; @tailwindcss/turbopack ^4 - Tailwind/Turbopack integration.
- typescript ^5 - type checking; @types/node ^20, @types/react ^19, @types/react-dom ^19 - TypeScript type definitions.
- eslint ^9 aur eslint-config-next 16.4.0 - linting aur Next.js lint rules.

11. Font ka exact jawab

- Font family Inter hai; Roboto nahi. layout.tsx mein Inter ko next/font/google se import karke --font-inter variable banaya gaya hai.
- globals.css ka --font-sans Inter ko primary font set karta hai; body aur poori site sans font isi se inherit karti hai.
- Visual styles mein regular (400), medium (500), semibold (600) aur kuch bold labels milte hain. Headings aam taur par semibold hain.
- next/font/google Next.js ka font-loading feature hai; alag Roboto package ya local font file project mein nahi mili.
- Icons aur kuch illustrations inline SVG/React components hain; package.json mein alag icon library listed nahi hai.
